# ANNUAL REPORT

OF THE

### DIRECTOR-GENERAL OF ARCHÆOLOGY

FOR THE YEAR

### 1905-06.

## PART I .- ADMINISTRATIVE.

1. The year 1905-06 has been one of exceptional activity in the Archæological Department. At its very outset, the earthquake, which overwhelmed Dharmsālā, did irreparable damage among the monuments of Northern India, and the precarious condition, in which some of them were left, made it necessary to take measures at once and without delay to avert further ruin and danger. The areas most affected by the earthquake were the Kāngrā District and Chambā State, among the monuments there which have been reduced to ruins being the famous Fort and temples of Kängra Kot and the temple of Sidhnath at Baijnath. Fortunately, the buildings in Chamba City itself escaped comparatively unharmed, but much destruction was done in the upper valley of the Ravi. It is worth noticing, though the phenomenon is common enough in earthquakes, that among the temples of Brahmaur and Chhatrarhi, the wooden structures, despite their great antiquity, withstood the shock much better than the stone ones.

2. In other parts of the Punjab, the greatest amount of damage was sustained by Wazīr Khān's mosque at Lahore, Jahāngīr's tomb at Shāhdara, the Shah Burj in the Delhi Fort, and the famous masjid in the Purana Qil'a. In every instance where there was any risk of further collapse, immediate steps had to be taken to shore up the dangerous parts until they could be more thoroughly repaired. The promptitude, which the Public Works Officers showed in this matter at such an anxious and strenuous time, deserves great praise. It has certainly meant the preservation of much that, otherwise, must

inevitably have been lost.

3. The total expenditure on conservation, from Provincial and Imperial sources combined, amounted to a little under five lakhs, of which three lakhs were spent in the Northern Circle, mainly on the conservation of the Mughal monuments at Agra, Ajmīr, Delhi and Lahore. The somewhat abnormal expenditure at these places is debitable chiefly to the following items :- the re-roofing of the Chhoti Khwabgah in the Lahore Fort, the laying out of the Hayat Bakhsh garden at Delhi, the dismantling and re-erection of the corner groups of columns in the Dīwān-i-'Āmm at Agra, and the restoration of the four marble minarets over the south gateway of Akbar's tomb at Sikandarah. To which must be added also the conversion of the Tahsil building at Ajmir into a Museum, and the addition of two more colonnades to those already restored around the quadrangle of the Taj. All these works were carried out under instructions from H. E. the Viceroy, and in the case of those at Agra and Sikandarah, a special effort was made to complete them in time for the Royal visit in the

special effort was made to complete them in time for the Royal visit in the autumn of 1905.

4. Among the multitude of monuments in other parts of British India, that have come in fer special repair, the most prominent are the following. In the Bombay Presidency, the Gol Gumbaz and Ibrāhīm Rauza, at Bījāpur; in Madras, the remains at Hampi and Mahabalipuram, and the forts at Gooty, Sankaridrug and Gurramkonda; in Bengal, the Black Pagoda at Konārak, and the Sonā Masjid at Fīrozpur; in the Central Provinces, the Hindu temples at Jānjgir and Māndhātā; and in Burma, the Kyaukku Onhmin and Nagayon Pagodas at Pagan and the spire of the Palace at Mandalay. The reconstruction

of the spire at Mandalay, it may be mentioned, involved an expenditure of

more than half the total sum (R72,123) spent in the Province.

5. In Central India and Rajputana, also, much activity has been displayed by the native Darbars in matters of conservation. The campaigns of work at Dhar, Mandu, Khajuraho and Chitorgarh have all continued to make good progress, and the Darbars concerned are much to be congratulated on the results achieved. His Highness the Mahārāja Scindia has taken up the preservation of some of the much dilapidated monuments at Gwalior; in Bikanir, the Fort of Hanumangarh has been under repair; and in other Native States, a variety of smaller projects have been carried out. In Hyderabad (Deccan), only one building, namely the fine old temple at Hanamkonda, has been under repair during the past year, but this is due not to any lack of interest on the part of His Highness the Nizām's Government, but to the fact that the Archæological Superintendent for Western India has found it impossible to give to the Nizām's Territory all the attention it deserves. Now, however, that the Central Provinces have been transferred from the Western to the Eastern Circle, it is hoped that Mr. Cousens will find time to visit at an early date at least the more important monuments of archæological interest in Hyderabad and advise as to their conservation.

6. As regards Kashmir, little or no information has been forthcoming since the establishment of the State Archæological Department, referred to in my last Report. In 1903, Dr. Vogel drew up a careful report on the preservation of some of the more important remains in the State, but how far effect has been given to his proposals is not known, as repeated endeavours on his part to elicit information on this point and on the progress made in the preparation

of lists of antiquities, have failed.

7. In the Provincial Report for the Bengal Circle, Dr. Bloch remarks that one of the effects of the stimulus which Lord Curzon's administration gave to the conservation of ancient monuments is that every owner of a temple or mosque in Bengal believes that he has a claim on public funds for its restoration. A misconception of this kind arising out of a natural desire to get all that can be got from Government, is not perhaps surprising, and occasional examples of it are not wanting in other parts of India. But it is certainly the exception rather than the rule, and there can be no doubt that the general effect of the Ancient Monuments Act and of the solicitude shown by Government in this matter has been to encourage and stimulate the co-operation of private owners and trustees of monuments. Indeed, instances have occurred in which the interest taken locally in the work of conservation has been so keen that the villagers themselves have come forward spontaneously and offered to assist in the work without payment of any kind. Their action may, of course, be the result of religious zeal, but it shows, at any rate, that the idea of self-help is by no means so universally lacking as Dr. Bloch suggests.

8. The only part of India where active work has been done by the Monuments Archæological Department in the matter of listing monuments is Rajputana. Here, in the districts round about Mount Abu, much new and valuable material was collected by Mr. D. R. Bhandarkar. Indeed, the remains in the locality proved to be so much more numerous than was at first anticipated, and so full of interest, that Mr. Bhandarkar found no time for going further afield. In Burma, orders were passed by the Local Government for a further revision of the preliminary lists by the Deputy Commissioners, and it is not expected that they will be made over to the Archæological Superintendent for some time to come. Various additions and changes were made in the standing lists in other

parts of India.

Museums and minor antiquities.

Listing of

9. The work of converting the Tahsil building at Ajmirin to a Museum for Rajputana and the Naqar Khana in the Delhi Fort into a local Museum for Delhi, is all but finished; so, too, is the erection of the new Peshawar Museum. Three small structures have been raised to protect inscription slabs at Shwebo in Burma, and a fourth has been erected over the famous Dhauli record of Asoka in Bengal. Improvements were effected by order of the Chief Commissioner in the condition of the Nagpur Museum, to which a special officer was appointed, and good headway was made both here and at the Mathura Museum in cataloguing and re-arranging the exhibits. The proposed foundation of a Museum in Chamba State had to be temporarily postponed owing to the earthquake, but

a large number of inscribed stones, that were in danger of being lost or damaged, were collected together and housed in the Chamba Dak Bungalow, ready to be

transferred to the Museum as soon as it is built.

10. In the United Provinces, Dr. Vogel continued his excavations on the Excavations. Buddhist site at Kasiā; where, besides clearing almost completely the large monastery previously discovered, he unearthed two other monasteries, one adjacent to, but of a much earlier date than, the large monastery, the other to the east of the central mound. A further discovery of interest was that of the enclosure wall of the whole Sangharama which proved to be a little over 5,000 feet long with a large entrance gate on the south side. Much of the area within this wall would appear to have been occupied by Buddhist structures, which extend in all directions beyond the limits of the central mound. Among the minor antiquities found at Kasia during the past season is a collection of metal vessels and implements and numerous clay seals, many of them bearing a legend to the effect that they belonged to "the congregation of reverend friars of the Convent of the Great Decease." This legend has, of course, much significance in connection with the identification of Kasiā, but, until it can be proved whether the seals in question were attached to letters posted from elsewhere or were made and used in the monastery itself at Kasiā, the question of the identity of Kasiā and Kusinārā must remain open.

11. Another famous old Buddhist site, where excavations have been carried out, is Rājgir—the ancient Rājagṛha—in Bihār. The work here, which was for sometime in my personal charge and afterwards supervised by Dr. Bloch, was confined to (1) making a careful survey of the site and identifying the landmarks noticed in the accounts of the Chinese pilgrims, (2) carrying out tentative digging at various points in and between the two ancient cities. The topographical survey, in which I had the able assistance of Mr. J. Wilson, late of the Survey of India, covered an area of some 50 square miles, the base lines being taken from the old Trigonometrical Survey stations. The detail survey, therefore, of this tract of country should serve other purposes besides a purely archæological one. Two objects of much interest, which our excavations in the Old Town brought to light, were the base of a statue in red Agra stone with an inscription in Kusana characters, and a brick cylindrical tower, adorned round its base with figures of Serpent-Deities, Ganesa, Siva, and a garlanded linga, but without an entrance of any kind to give access to the interior. This tower dates back apparently to the fourth or fifth century, and we may surmise that it was connected with serpent worship, but what the precise purpose was, for which it was built, is impossible

to say; it is certainly unique of its kind in India.

12. In the Madras Presidency excavations were carried out by Mr. Rea at the Amaravati stupa, at the buried Jain shrines at Danavulapadu in the Cuddapah district, and at an extensive group of cromlechs in a reserved forest near Perambair to the south of Chingleput. All three places yielded valuable results, but the discoveries at the Buddhist Tope of Amaravati must take the first place. This site was thought by many to have been already completely excavated, but Mr. Rea has now found that the ancient ground level around the circular pavement is much lower than was supposed by previous explorers and his excavation of this area has disclosed a finely preserved stūpa with a series of beautiful marble carvings, besides marble posts, statues of Buddha, iron implements, ivory ornaments, seals, coins and inscriptions—the whole making a collection which cannot but add much to our knowledge of this famous spot.

13. Before leaving the subject of exploration I should mention also the discovery of a Buddhist stupa at Chaitru in Kangra-the first monument of its kind known to exist in that district, and also a few finds of no particular value made by Mr. Taw Sein Ko at Peikthano in Burma. It is much to be regretted that exigences due to the presence of local famine in the United Provinces, compelled us to abandon, for the time being, the highly important excavations at Sarnath. It is hoped, however, that the work here will be resumed at a very early date.

14. In connexion with the excavations at Rajgir, some slight trouble arose from the removal of a tiny and dilapidated shrine which had been erected on the top of the cylindrical tower referred to above. This shrine, which is known locally as the *Maniyār Math*, had long since fallen into disuse as a place of worship, and had lost whatever images it might ever have possessed. No sooner, however, had Dr. Bloch begun to remove it than extravagant rumours spread to

10/8

Calcutta crediting him with all sorts of sacrilege, and an agent was sent down to Rajgir by a wealthy member of the Jain community in order to enquire on the spot into the alleged vandalism. The agent, being an enlightened man, at once appreciated the service that the Government was rendering in bringing to light these remains of an ancient religion, and the incident closed with expressions of good-will on both sides. The little shrine on the top was rebuilt when the excavation had been completed,

Survey work.

15. In addition to the topographical survey of Rajgir already mentioned, the survey of Vijayanagar, which has been in hand for several years past, was brought to a finish, and the complete map of the city and surrounding country is now being compiled. In Bengal, a detail survey of the Khandadgiri caves was made by Dr. Bloch, and in the Punjab, Dr. Vogel finished 16 more drawings of the enamelled tiles on the façade of the Lahore Fort.

Tours.

16. Detailed accounts of the tours made by the Provincial Officers are included in their respective reports and there is no need for me to recapitulate them here. My own tours carried me in the early part of the winter to Lahore, Agra, Delhi, Puri and Konarak, mainly in the interests of conservation work. Subsequently, I was in camp for about nine weeks at Rājgir, superintending the excavations there, and later on visited Patna and Kasia, returning thence to Agra where my office was located for the winter. Full reports on the majority of the places visited by me have already been submitted to the Government of India.

Epigraphy.

17. About 1,200 inscriptions were copied during the year. Of these, 605 belong to Southern India. They add to our knowledge of almost all the dynasties of the Presidency, and some of them are of considerable interest. Another old Pallava king, Kumāravisņu II, the son of Buddhavarman, has been brought to light. The same is the case with the Ganga-Pallava King Vijaya-Aparājitavikramavarman, about whom we learn that he successfully resisted the Pandya King, Varaguna. The date of this latter king has been settled by a new inscription as the later half of the ninth century.

The most important find in Southern India was a set of copper plates from Tiruvālangādu containing a Cola geneology and several interesting facts connec-

ted with the history of the Colas.

In Burma, 468 estampages were made from the inscriptions collected in Pagan by King Bodawpaya more than hundred years ago, mentioned in my last Some interest also attaches to the bilingual inscription on some votive tablets from the time of King Anawrata. A short Sanskrit legend belongs to the mould from which the tablets have been cast, and a Pali inscription of the same contents has then been engraved on the back or below.

Very few inscriptions were copied in the Eastern Circle. The most important ones are the Kharavela inscription from 165 B.C., and the inscription on the

Sonbhandar cave at Raigir from the second or third century A.D.

One hundred and three inscriptions were copied in the Northern Circle. Most of them come from the Chamba State. The excavations at Sarnath yielded some new inscriptions. Some of them belong to the Maurya period, others to the fifth to seventh century A.D. Some interesting seals were found at Kasia. They belong to the old monastery at Kusinārā, where the Buddha entered into Nirvana, but they do not prove the identity of the old Kusinara and the modern Kasiā.

In the Western Circle, 24 inscriptions were copied. A new set of copper

plates was discovered at Mandhata.

18. In addition to the seven Annual Reports of the Provincial Officers, and Publications. one of the Director-General, Parts 2 and 3, Volume VIII of the Epigraphia Indica were issued during the year, and Part 4, Volume VIII, was passed for final printing. The second volume on the Architecture of Ahmadābād was also published by Dr. Burgess. The unlooked-for discovery of a number of fresh inscriptions in Chambā State necessitated the re-arrangement of the materials, which Dr. Vogel had in hand for a special volume on the subject, and it has now been decided to divide it into three instead of two parts as was originally proposed. Dr. Vogel also has two more publications in hand, namely, a catalogue of sculptures preserved in the Municipal Museum, Mathura, and another of those in the Central Museum, Lahore. No report for the year was forthcoming from the

It should be added here that in order to secure uniformity in the period dealt with in the Provincial Reports, arrangements have been made during the year that all Reports in future should cover the same period as the financial

year.

19. The collection of books was increased by the purchase of some 280 new Library volumes, and 173 more were acquired as presents, or in exchange for the publications of this Department. Among these accessions I may mention the following:—Recueil d'archéologie orientale, par Ch Clermont-Ganneau, vols. 1-5; Ethnologisches Notisblatt, herausgegeben von der Direktion des königlichen Museums für Völkerkunde in Berlin, 3 vols.; and Zeitschrift für Numismatik, herausgegeben von Alfred von Sallet, vol. 1-24.

In addition to the above, 80 maps, mostly sheets of the Indian Atlas, were

acquired for the library.

May 1905, and his place was taken up by Mr. D. R. Bhandarkar. Dr. Stein was placed on special duty with effect from the 1st October, 1905, preparatory to his deputation to Eastern Turkistan, in order to give him time to complete his Report on his previous journey. The officiating appointment in the Frontier Circle was held by Dr. Vogel. Pandit Hiranand—the latter's Assistant—was deputed in January 1905, to re-arrange and classify the antiquities in the Nagpur Museum. The archæological scholarships, in my office, were held by Pandit Daya Ram Sahni, M.A., and Maulvi Ghulam Yazdani, B.A., during the year. It gives me great pleasure to testify to the good work done by both scholars; Pandit Daya Ram Sahni especially, shows great promise, and I have no doubt that he will develop into an able Archæologist.

that he will develop into an able Archæologist.

As a matter of convenience, it should be added, and in order to give the Superintendent, in Burma, greater facilities for supervising the work of conservation at Mandalay and for revising the lists of antiquities, the local archæological

office, in Burma, was transferred from Rangoon to Mandalay.

J. H. MARSHALL, Director-General of Archæology.

#### APPENDIX A.

Special Grant-in-aid.—The lakh of rupees provided by the Government of India for assisting the Local Governments in special archæological works, was further supplemented by R19,769, making a total of R1,19,769 in all. The following allotments were made:—

# ANNUAL REPORT.

OF THE

# DIRECTOR-GENERAL OF ARCHÆOLOGY

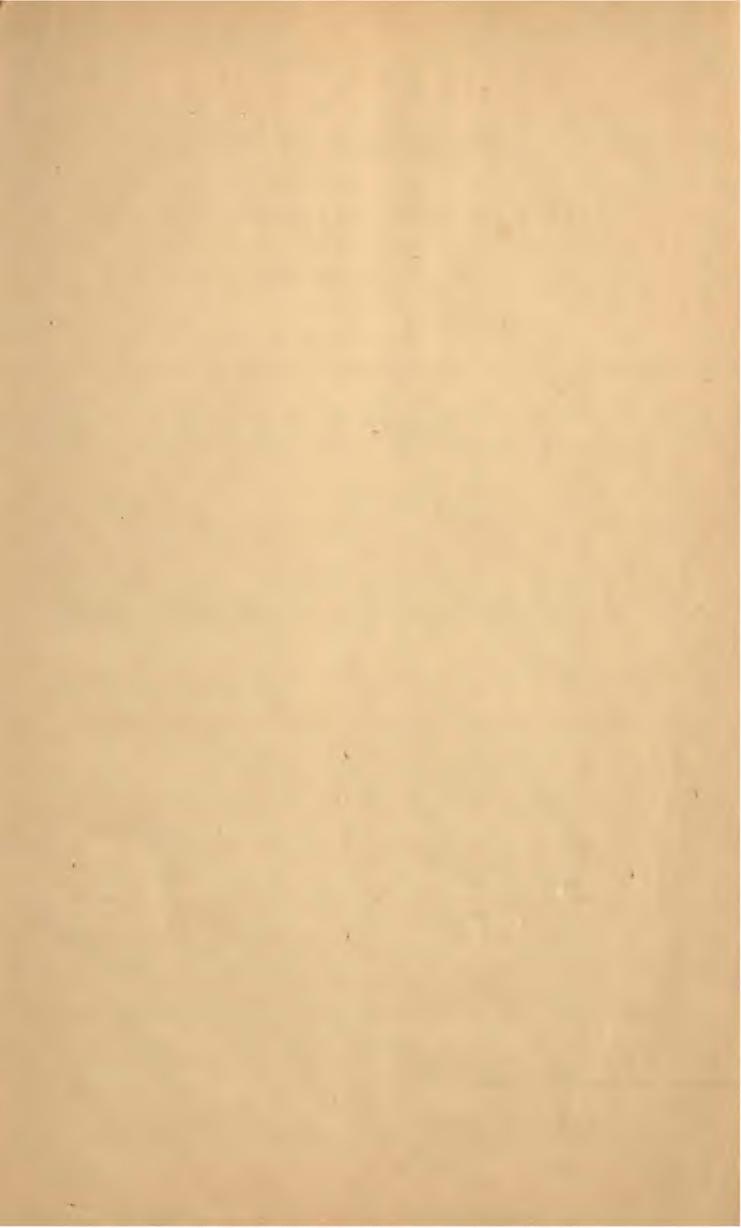

FOR THE YEAR

1906-07.

PART I .- ADMINISTRATIVE.

## ANNUAL REPORT

OF THE

### DIRECTOR-GENERAL OF ARCHÆOLOGY

FOR THE YEAR

### 1906-07.

### PART I .- ADMINISTRATIVE.

Organization.

- 1. The scheme referred to in my annual report for 1904 05, relative to the reorganization of the Archæological Survey Department, received the assent of the Secretary of State in January 1906, and effect was given to it by the Government of India in their Resolution No. 134-14-6, dated the 28th April of the same year. The chief features of this scheme are as follows:—With the exception of the Assistant Superintendent in Western India, the Archæological Staff has been placed on a permanent footing, and the salary of the provincial Superintendents raised to Rs. 500-25-800 a month, a recess of three months in the hills being allowed for all Archæological officers serving under the European leave rules. The names of the Circles moreover, have been changed so as to render them more descriptive and appropriate; the Central Provinces and Berar, formerly under the Superintendent of the Western (or Bombay) Circle, have been transferred to the Eastern or Bengal Circle, the staff of which has been strengthened by the appointment of an Assistant Superintendent; and the Frontier Circle, where the Archæological work was previously entrusted to the Inspector General of Education as a collateral charge, has been provided with a full time Superintendent. Finally, an appointment of Government Epigraphist for all India has been created in lieu of the former Government Epigraphist in Madras and special provision has been made for the epigraphical work of the Sourthern Presidency by adding to the staff there an Assistant Superintendent for Epigraphy.
- 2. Another change introduced during the year relates to the procedure followed in connection with the allotment of funds from the special grant for Archæology made by the Imperial Government. Owing to the want of a uniform method in the submission of estimates for Archæological works, much time used to be lost in the beginning of each year, in awaiting sanction for the allotments proposed, with the result that in some cases the funds allotted could not be utilized during the financial year. Under the new orders Superintending Engineers are required to forward to the Archæological Superintendents early in November, each year, a list of all archæological works likely to be completed by the end of the following March, together with an approximate estimate of the amount required to finish those which will still be in progress; a list of works sanctioned but not taken in hand; and a general forecast of the works proposed for the coming year. These lists, after being scrutinized and arranged in order, are forwarded by the Local Governments to the Director-General of Archæology with statement of the grant which it is proposed to allot from Provincial Revenue, and the latter is then in a position to advise the Government of India as to grants-in-aid to be made from Imperial sources.
- 3. The total expenditure on Conservation from Imperial and Provincial Conservation. sources combined, but excluding the provision made in Native States, amounted to Rs. 5.49.951. Towards this sum the Government of India contributed nearly a lakh, and more than two lakhs were provided by the Local Governments of Burma and the United Provinces. In Burma, the repair of the spire of the Mandalay Palace required a specially large allotment (Rs. 64,873), but apart from this a number of other important works that have been taken up a Mandalay, Syriam and, most particularly, at Pagan, where among the monument a

13DGA .2

that have been in the repairers' hands this year may be noticed the Kyaukku Onhmin, and the Seinnyet, Mynikaba, Sulamani, Lawkananda, Bu-Paya, and Sapada Pagodas. In the United Provinces, the liberal allotment made by the Local Government has been mainly devoted to the extended campaign of repair that has now been in progress for several years among the monuments at the Taj and Fort at Agra, at Fatehpur Sikri and at Jaunpur. So also, in the Punjab, the palaces and tombs of the Muhammadan Emperors at Delhi and Lahore have continued to be the chief centres of activity, though in this province as well as in Agra and Oudh funds have been found for several other important undertakings such as the repair of the Dhamekh Tower at Sarnath, of the Jami Masjid at Banda and of some well known tombs at Majhera, Farrukhabad and Thanesar.

- 4. Among the many historic monuments in other parts of India that have been under repair during the past year the following may be especially mentioned. In the Madras Presidency, the Anantasanagudi Temple and Muhammadan Palace at Hampi, the Ramasvami Temple at Tadpatri and the fortresses of Gooty, Krishnagiri and Tanjore; in Bombay, the Jami Masjid, Ibrahim Rauza and Gol gumbaz at Bijapur, the Harem at Sarkhei, and several valuable structures at Dholka; at Ajmer, the Badshahi Buildings in the Naya Bazar; in the Central Provinces, the temples at Lonar and Kothali and the forts at Chanda and Ballarpur; in Bengal, the Black Pagoda at Korarak, the temples at Bhubanesvar and the Tomb of Bukhtiyar Khan at Chainpur; in Eastern Bengal and Assam, the remains at Dimapur, the temple of Hayagriva at Hajo, the fort at Munshiganj and several celebrated monuments at Gaur and Panduah.
- 5. The increased attention given to ancient buildings in Eastern India, which is due in a large measure to the changes in the local administration, is a matter for especial congratulation. A few years ago there were relatively few monuments except the most celebrated ones in Bengal to which the Local Government could devote its care, and some, indeed, among them seemed doomed to suffer irretrievably before they could be taken in hand. With the partition, however, of the two Provinces and the transference of the important groups of buildings at Gaur and Panduah to the Eastern Bengal, the prospects of conservation work in the outlying districts of both Provinces have vastly improved, and a local interest for them has been awakened in many places where it was certainly not existent before.

Native States.

6. While so much has been done for ancient monuments in British India, the progress of conservation work made during the past year in Native States nas been equally satisfactory. The Udaipur Darbar has completed the reconstruction of the Jaina Tower at Chitorgarh; H. H. the Maharaja Scindia has continued the work of repair among the monuments at Gwalior; in Chhatarpur State, much money and care has been devoted to the famous group of temples at Khajuraha; and in Jhalawar, all that was needed has been done for the protection of the ruins of Chandravati. These and many other works of less importance sufficiently attest the zealous activity displayed by the Native Darbars in the cause of conservation. Indeed, the only State which still seems backward in responding to the appeals of the Government of India is Kashmir. It is true that some show was made three years ago in instituting a State Department of Archæology, but so far no practical results have been shown, and the famous and unique monuments of the State are still crumbling to decay.

Pagoda trusts.

7. In connexion with the preservation of Pagodas in Burma, I suggested in 1904 that it might be well to institute an inquiry into the management of the Pagoda trusts formed under section 539 of the code of Civil Procedure, and the inquiry which the Local Government ordered in response to this suggestion, was completed by the Archæological Superintendent in December 1906. He found that owing to the absence of efficient control, there had been malversation of funds, and that while the preservation of the shrines had been neglected, mordinate sums had been expended on providing entertainments and showy decorations. The recommendation, however, which he submitted with a view to rendering the administration of trust funds subject to control by Deputy Commissioners were not accepted by the Local Government, the Lieutening

Governor holding that " the examination of trust funds, the erection of new buildings and the maintenance and repair of Pagodas are not matters with which officers of Government should concern themselves in their official capacity, except in so far as is provided by the Ancient Monuments' preservation Act." Although this view has been taken by the Local Government, it is still hoped that Local officers will use their influence in a non-official capacity with the trustees or owners of religious buildings to prevent the erection in future of corrupated iron structures and other eyesores such as now disfigure so many of the glorious old monuments of Burma

8. Another matter relating to conservation which was dealt with during the Manu definitractions year was the publication of a manual of "Principles for the guidance of those entraction, "Garding Coa est valion," The necessity for such a manual for use among Public Works' Officers had long been apparent, and it was hoped that it would prove of value also, if placed in the hands of the owners or trustees of monuments not under Government control, who are seldom reluctant to profit hy expert advice unless it har pens to clash directly with their own interests. For the most part, the manual recently issued is based on notes which I had personally collected in the course of my tours in India and Burma, but some valuable help was obtained from a set of instructions on the same subject issued many years ago by the Madras Government. Of Similar manuals published in other countries little use, unfortunately, could be made as the local conditions which they are designed to meet are radically different from those prevailing in India

Q. The work of listing monuments has been mainly confined, as last year, to Listing of mossments Rajputana, where Mr. Bhandarkar worked carefully through the antiquities of two more States, namely Sirohi and Marwar. Much of the ground traversed by him had been practically untouched before, and the materials which he has col-lected together furnish many new and interesting features, among which may be noticed an inserbed lat found at Ghantiyala, about 22 miles west of Jodhpur, and the remains of 12 temples of the Gupta period at Osia, 32 miles north of the same place. There still remain five more States in Rajputana to be explored before the lists are complete, but Mr. Bhandarkar is already beginning to cast the material he has amassed into shape and to prepare it for final publication. Mr. Cousens suggests that it will add greatly to the value of the catalogue if small illustrations are inserted of the more important remains, and with this proposal I heartily agree. In Burma, it should be added, most of the initial district lists of monuments were received in the Secretariat, but the collection was not complete at the close of the year. Various additions and changes were made in the standing lists in other parts of India.

10. The museums at Ajmer and Peshawar, towards the latter of which a M issues and n there sum of Rs. 15,000 was contributed as an Imperial subsidy, were both brought to completion, and two new local museums were put in hand, one at Khajuraha and the other at Sarnath. The Khajuraha museum is designed for the protection of a vast array of sculptures which had fallen from one or other of the temples at that site and which cannot be replaced in their original position. At first, it is to be in the form of a rectangular enclosure, against the outer wall of which and some inner dwarf walls the sculptures will be placed; then, as more funds become available, lean-to roofs will be added for the better protection of the sculptures. The museum at Sarnath has been planned on more pretentious lines, as there are crowds of sculptures and other antiquities from the excavations there which require to be most carefully protected. Its plan will eventually be somewhat like that of the old Buddhist monasteries with an open courtyard in the centre and a slightly projecting hall in the middle of each face, but for the present rather less than half of the entire building is being constucted.

11. Of fresh acquisitions for the Archæological Museums a large number have been made in the course of the year among some of the most noteworthy finds dealt with under the Treasure Trove Act and purchased by Government was a large hoard of king Nahapana's coins found near the village of Jogaltembhi in the Nasik District, and especially valuable by reason of their excellent preservation, and the fact that they furnish us with the first known specimens of the coins of Satakarni I, which appear to have been those of Nahapanas restruck.

Another interesting find consisted of 356 silver larins, brought to light at the village of Saitaoden in the Ratnagiri District, while another, but no less valuable one contained 20 ancient silver coins of Burma which were found at Shwenyaungbu in the Yamethin district. Accounts of these treasure trove coins will be found in the Provincial Reports. Apart from them the Archæological Departmen has purchased or received gift of a large number of antiquities of various sorts including manuscripts, stone and brass images, terracottas, seals and coins.

Treasure trove,

12. With regard to acquisitions under the Treasure Trove Act, the question of the procedure to be adopted in dealing with cases under the Act was fully considered by the Government of India and amended instructions were issued in their Resolution No. 889-903, dated the 30th March 1907, in which the following points were specially dealt with. (1) The examination of coins; (2) the selection and distribution of specimens; and (3) the disposal of the surplus. The chief objects of the new instructions is to ensure more careful discrimination being exercised in the acquisition of coins and more exact and uniform records being kept of the original surroundings and exact nature of each find; to promote provincial interest in and to facilitate and encourage the local study of numismatics; and to give private collectors the opportunity of securing any coins of value not required for the State Museums.

pieratie |

- 13. In the field of Exploration the two most extensive undertakings were those at Kasia and Sarnath. At the former site Dr. Vogel has continued the excavation of the monasteries, the earliest of which appears to date back to the 1st century of our era, and has laid bare also a large number of smaller monuments, chiefly stupas, to the south of the central shrine. Among the minor finds made by him may be mentioned more than 500 clay sealings, the great majority of which belong to the "convent of the Great Decease". These sealy ings having apparently been used for letters cast doubt, in Dr. Vogel's opinion on the supposed identity of Kasia with the ancient Kusinara, and this doubt has been strengthened by the discovery of a seal die bearing a legend which refers it to "the community of frairs at the convent of Holy Visnudvipa." The form Visnudvipa corresponds to the Vethadipa of the Pali books, where a portion of the relics of Buddah were deposited after the Mahaparinirvana, and with this place Dr. Vogel now inclines to identify the modern Kasia.
- ments in the stupa area belonging to various dates between the Mauryan epoch and to the 12th or 13th centery A. D. Prominent among them is an exceptionally well preserved group of stupas in the North-East corner, which appear to have marked some particularly sacred spot and which are of more than usual importance because within the outer and later shells of several of them the earlier structures were found in practically perfect preservation, while in the relic chambers of others numerous sculptures and clay tablets came to light. Many detacthed antiquities of value were also recovered in this part of the site including among other things parts of a Mauryan railing, bearing inscriptions and a Pali record of the 2nd or 3rd century A. D.—the only known one from Northern India. But the most valuable result of the year's work was the discovery that the northern side of the site is occupied by several extensive monasteries built, one above the other at different intervals of time. The uppermost of these is a singularly handsome structure, and of more imposing proportions than any yet brought to light in India, while the earlier monasteries below, though smaller in plan, are also of fine and massive construction, and in the lowest stratum specially are likely to yield much of value. It should be added that, apart from the value of individual finds, the excavations at Sarpath have added greatly to our knowledge of Indian Art.
- 15. In the Frontier Province new ground was broken by Dr. Spooner at the small site of Sahri Bahlol near the foot of Takht-i-Bahai where besides architectural remains, a specially rich treasure of Gandhara sculptures was recovered by him which in point of beauty and interest yield to few, if any, of the sculptures of this school yet discovered.
- 16. Yet another excavation that has yielded results of great import for the history of Buddist iconographic art was that of the "Petleak" pagoda at

Pagan in Burma, where a long series of terra-cotta plaques has been found built into the walls of an arched corridor or ambulatory which surrounded the pagoda on all sides. These plaques, clear cut and admirably preserved as they are, form a remarkably fine collection of illustrations of the Birth Stories of Buddha, as they were current at Pagan in the eleventh century of our era, and besides throwing light on many points connected with the history of the Jatakas, constitue an important addition to our knowledge of mediæval art.

- 17. In the Madras Presidency, the famous site of Amaravati, where Mr. Rea continued his digging, vielded another harvest of inscriptions, marble rails sculptures and other miscellaneous antiquities, from some of which it becomes apparent that the site was in occupation by the Buddhists as far back as the Mauryan epoch. Another discovery in the South of India that deserves mention, is that of some ancient Caves, with beds chiselled out of the rock, in the Madura District.
- 18. Finally, it remains to mention the exavation of the Black Pagoda at Konarak where the sanctum of the temple has been almost completely cleared of the debris in which it had been immured. The garbhagrtha now proves to be standing to about one-thrid of its original height, and to be decorated with large niches in which statues were placed, and with the same class of erotic scenes in relief with which the rest of the Temple is ornamented. Round about it have been found many statues executed in green chlorite stone and, strange to say, almost perfectly preserved, despite the thousands of tons of stone heaped up above them.
- 19. In Kashmir, a most useful piece of work was done by Mr. Nicholls in survey Work. surveying the most important examples of the wooden architecture of that country. Practically nothing had been done in this direction by earlier archæologists, and a long felt want is now supplied by the carefully measured drawings which are being published in the 2nd part of this Report. Mr. Nicholls also carried out a detailed survey of the celebrated Mughal Gardens of Kashmir and drew up a scheme, in each case, for restoring them, as far as possible, to their anceint form and beauty.
- 20. In Mandalay, the architectural survey of the Palace Buildings was continued, and a division of labour decided on between the Archæological and Public Works Departments, 18 drawings being executed in the course of the year by the former and 14 by the latter Six coloured drawings of the tile-work in the Lahore Fort were completed in the office of the Archæological Superintendent, Punjab and United Provinces, besides eight pencil drawings of the Shalimar and Nishat Gardens near Srinagar.
- 21. Besides the above numerous plans and other drawings, a detailed list of which will be found in the respective Reports, were prepared in connection with conservation work and excavations. They total 131 in all.
- 22 Accounts of the tours undertaken by the Superintendents will be found in their respective reports. Mr. Cousens, who officiated as Director-General of Archæology during my absence on leave to Europe, visited Peshawar, Lahore, Delhi and Agra in October 1906, and, later on, Agra, Ajmer, Bhurtpur, Byana and Dig, and finally made over charge of the office to me in Bombay on 22nd December 1906. My own movements were directed towards Burhanpur, Nagpur, Bilaspur and Jhanjgir in the Central Provinces, and afterwards to Calcutta, where I joined Dr. Sten Konow, the newly appointed Epigraphist for India. We proceeded together, on the 22nd January to Burma, and visited Rangoon, Hmauza, Prome and Pagan, and returned to Benares on the 12th 1 ebruary 1907 to undertake the excavations at Sarnath. Heft Benares on the 21st February and returned to Head Quarters after visiting Delhi and Agra.

23. The following account of the epigraphical work of the year is supplied by Dr. Sten Konow :--

The number of inscriptions copied during the year was nearly 800. Of these 640 belong to the Southern, 53 to the Western, 29 to the Northern, 11 to the Frontier Circle and 38 to Burma. To the number of inscriptions copied in the

13DGA

Northern Circle should be added some twenty epigraphs brought to light during the excivations at Sarnath. The inscriptions found in Northern India during the year were comparatively few in number, and owing to the absence of the Superintendent on sick leave, no new inscriptions were copied in the Eastern Circle.

- 24. The most important of the new inscriptions copied in the Northern circle were found during the excavations carried on at Samath and Kasia The epigraphs brought to light in the former place mainly consist of repetitions of the Buddhist creed and short dedications, some of which go back to Mauryan times, while the latest ones take us down to the eleventh and twelfth centuries. Among these I shall only mention a short dedication containing the name of Kumaragupta, who seems to be identical with the ancient Gupta Emperor. This and other epigraphs show that the Gupta period was of the greatest importance for the history of the old Samath monasteries. Considerable importance attaches itself to a fragment of a stone umbrella containing a short inscription in Pali and in characters of the second or third century A D. It is the oldest North Indian inscription written in the sacred language of Southern Buddhism and is of interest for the history of the Pali Canon. Another incomplete inscription found on several fragments of a stone to the west of the Dhamekh Stupa throws some light on the old name of the Sarnath monastery. It is dated in the Kalachuri year corresponding to A. D. and in the reign of the Chedi King Karnadeva, and mentions a gift to the monks in the Saddharmachakrapravarttana mahavihara. The name Saddharmachakra was already known from old seals discovered by Cunningham, specimens of which were also found during the year's excavations. These seals also mention a gandhakuti of the Buddha within the Saddharmachakra. This gandhakuti is also mentioned in some epigraphs on old rail pillars found by Mr. Oertel and during the last years diggings. The fragmentary inscription noticed above helps us to explain these terms Saddharmackakra was the name of the monastery, and the gandhahuti probably was a big shrine containing a Buddha statue, within the monastery.
  - 25. The most important epigraphical find at Kasia was a seal die with the legend sri-vishnudvipa vihari-bhikshusanghasya, (the seal of) the community of monks residing in Vishnudvipa. The fact that this is a die, while all other seals discovered at Kasia are casts, has been adduced by Dr. Vogel as making it probable that the old name of the Kasia monastery was Vishnudvipa, which must correspo d to the Vethadipa of the Pali books.
  - 26. The inscriptions found during the year in the Western Circle comprise several of considerable interest. One epigraph, copied in a ruined temple at Kiradu in the Mallani District, refers itself to the reign of the Chaulukya Bhimadeva and is dated in Samvat 1235, and mentions a Chohan feudatory of his Madanabrahma. More important is an inscription of the Pratihara Nagabhatta, found in a temple in Buchkala, which furnishes the date Samvat. 872 for this ruler, of whom we know that he conquered king Chakrayudha of Kanauj. Some new inscriptions of the feudatory Pratihara Kakkuka, dated Samvat 918, have been discovered at Ghatiyala.
  - 27. A short genealogy of the Paramaras of Chandravati has been discovered at Girvad (Mount Abu). It takes us back to Dharavarsha, for whom the oldest date as yet known is Samvat 1220. Another inscription, found at Kinsaria in the Parbatsar District, introduces us to a new branch of the Chahamana dynasty. In this connexion I shall also mention a collection of about 15,000 coins of Mahapara, found in a mound at Nasik.
  - 28 Most of the inscriptions copied in the Frontier Province had originally been collected by Dr. Stein, and were subsequently transferred to Dr. Spooner's office. No information is forthcoming about their findplaces. Most of them are too fragmentary to be read. But one, which is written in raised Sarada let ers, is of importance as showing that the hundreds are not always omitted in da es of the Laukika era used in Kashmir.

- 29. As will be apparent from the figures given above, the bulk of new inscription as usual comes from Sourthern India. Among these are some few written in old Brahmi of the 3rd or 2nd century B. C. It has not as yet proved possible to translate them, and it is doubtful whether they are written in an Aryan or a Dravidian dialect. These inscriptions have been found in old caves in the Tinnevelly and Madura districts. The caves are probably Buddhist, and the inscriptions furnish valuable proofs of Aryan, probably Buddhist, civilization at a very carly date.
- 30. Most of the South Indian inscriptions copied during the year, however, are of much later date. They contain contributions to the history of almost all the numerous dynasties, of Southern India. As usual, the Vijayanagara dynasties the families of the Cholas and Pandyas are most frequently represented. With regard to the former, we are introduced to a new member of the Nellore branch of the first dynasty, which was founded by Kampa, the son of Samgama I. Kampa's son Samgama II was reigning in Saka 1278. The new prince brought to light during the year was a brother of his, named Virasri Savana Odeya, who must have reigned simultaneously with his brother, his accession having taken place in Saka 1270 and inscriptions of his being dated in the Saka years 1273, 1275 and 1283.
- 31. From other inscriptions we learn that Vira Vijaya, the son of Devaraya I. also had the name Vijaya Bukka. He is therefore probably identical with the Vira Bukka mentioned in an inscription from A. D. 1423-24. His son Devaraya II ascended the throne in A. D. 1420-21, so that father and son would have reigned simultaneously. Two new inscriptions refer to disturbances caused by a war against the Gajapati king of Orissa during the reign of his brother's son Mallikar juna, and thus confirm the information about the invasion by the Orissa king which had been gathered from indications in a Sanskrit play.
- 32. During last year's operations Mr. Venkayya was able to show that the initial date of the old Pandya king Varaguna was A. D. 862-63. Among the new inscriptions copied during the year now under review are two sets af copper plates from Sinnamanur in the Madura district, which contain some additional information about the genealogy of the Pandyas. The geneology opens with Arikesarin, who is called Maravarman in other sources. He claims to have defeated the Pallavas, at Sankaramangai, and this event is probably identical with the fight mentioned in the Udayendiram grant of the Pallavas Nandivarman. Arikesarin's time would then be the middle of the eighth century. His great grand son was Varaguna, but this king had a grandson Varagunavarman, and he is probably the Varaguna whose accession took place in A. D. 862-63. His father was Maravarman Srivallabha Ekavira, who is stated to have conquered a certain Maya Pandya. We may infer from this that there were more than one branch of the Pandyas ruling at the same time. On the whole, there are still many points in the history of the Pandyas which will have to be settled by future research, though much has of late been done to remove the veil surrounding it.
- 33. An inscription from Elvanasur in South Arcot, which belongs to the 9th century, seems to show that Pandya influence then extended far into the Pallava country. Towards the end of that country, however, the Cholas became the paramount power in Southern India. An inscription in the Kanthesvara Manikanthesvara temple at Tirumalpuram in North Arcot informs us that the father of Parantaka I (whose accession took place between the 15th January and 25th July 1907), reigned 22 years, and that Parantaka himself was known as Parakesarivarman "who took Madirai (Madura) and Ilam (Ceylon)." It seems that he was at war with the Pandyas three times during his reign. The title of "conqueror of Madura" occurs in inscriptions from his third year. In his twelfth year he assumes the title "a Rama in warfare", after a war in which the Pandyas were assisted by the King of Ceylon. The title mentioned above and referring to a conquest of Ceylon is only found in inscriptions from his last years, and he probably assumed it after a third expedition.
- 34. The interval between Parantaka I, the last of whose inscriptions is dated in A. D. 947-48, and Rajaraja I Rajakesarivarman, who ascended the throne between the 25th June and 25th July 985, is still very unsatisfactorily

known. An inscription of Parantaka's grandson Sundara Chola or Parantaka II seems to exist in the Sivayoganathasvamin temple at Tiruvisalur in the Tanjore District. It is, however, built into the wall and could not be copied Two new inscriptions of Parakasarivarman perhaps refer to his son Aditya II Karikala. Seven new inscriptions refer to a Parthivendradivarman, who was perhaps a feudatory of this prince.

- 35. A new inscription of Rajaraja I informs us that he was also known as Mummadi Choladeva. Another, from his eleventh year, shows that the worship of Hanumat was then sufficiently established in the Tamil country, as the gift of a lamp to a shrine of this god is recorded. In the times of Rajendra Chola I, who began to reign between the 27th March and the 7th July 1012, the Jayangonda-Chola-mandalam or Tondai-nadu must have extended northwards up to the Nellore district. This must be inferred from Chola inscriptions in Tamil found in Puncanur in North Arcest, and adicioing districts from that time Tamil found in Punganur in North Arcot and adjoining districts from that time and onwards.
- 36. More than 900 impressions copied by Mr. Butterworth in Nellore were transferred to Mr Venkayya's office during the year 1905 of. They have all now been examined and compared with the printed texts.
- 37. The inscriptions copied in Burma during the year do not contain much historical information. Most of them are Buddhist, but none of them contain any facts which can be used for inferences about the history of Buddhism in Burma.
- 38. In addition to the Annual Reports of the provincial officers and two of the Reports and publi-Director-General, parts 4, 5, 6 and 7 of volume VIII and part I of volume IX of eations.

  The Epigraphia Indica were issued during the year. The index to Volume VIII was also completed and prepared for the press. The final proof of the volume on "Pallava Architecture" by Mr. Rea was submitted to the Government of Madras and orders were passed for its publication. It may be stated here that with the July number of the ninth volume, the editorship of the Epigraphia Indica was transferred from Dr. E. Hultzsch to Dr. Sten Konow, the Government Epigraphist for India.

39. 381 new volumes were added to the library during the year, 107 being purchased and 274 acquired as presents or in exchange for the publications of

this Department. None of these call for any special mention.

40. The reorganization referred to in paragraph 1 above necessitated the Personnel.

appointment of several new officers in the archæological staff. Mr. A. H. Longhurst was appointed Assistant Superintendent, Eastern Circle; Doctor D. B. Spooner, Superintendent, Frontier Circle; Doctor Sten Konow, Government Epigraphist for India; and Mr. V. Venkayya, Assistant Superintendent for Epigraphy in Madras. Doctor Bloch went on combined leave, on medical certificate, for thirteen months and six days from the 7th November 1906, and Mr. Longhurst officiated for him with effect from the 16th January 1907. Eight months combined leave was also taken by me with effect from the 14th April 1906 and Mr. H. Cousens, Superintendent, Western Circle, Officiated during my absence, while Mr. D. R. Bhandarkar held the current charge of Mr. Cousens' office. The Archæological scholarships continued to be held by Pt. Daya Ram Sahni, M. A., and Maulvi Ghulam Yazdani, B. A.

The Head Quarters of the Southern Circle [were transferred to Madras from Bangalore.

> J. H. MARSHALL, Director General of Archaelogy.

Liberary.

### APPENDIX A.

Special Grant-in aid — The lakh of rupees provided by the Government of India for assisting the Local Governments in special archæological works, was further supplemented by Rs. 19,000 making a total of Rs. 1,19,000 in all.

The following allotments were made:-

# ANNUAL REPORT

OF THE

# DIRECTOR-GENERAL OF ARCHÆOLOGY

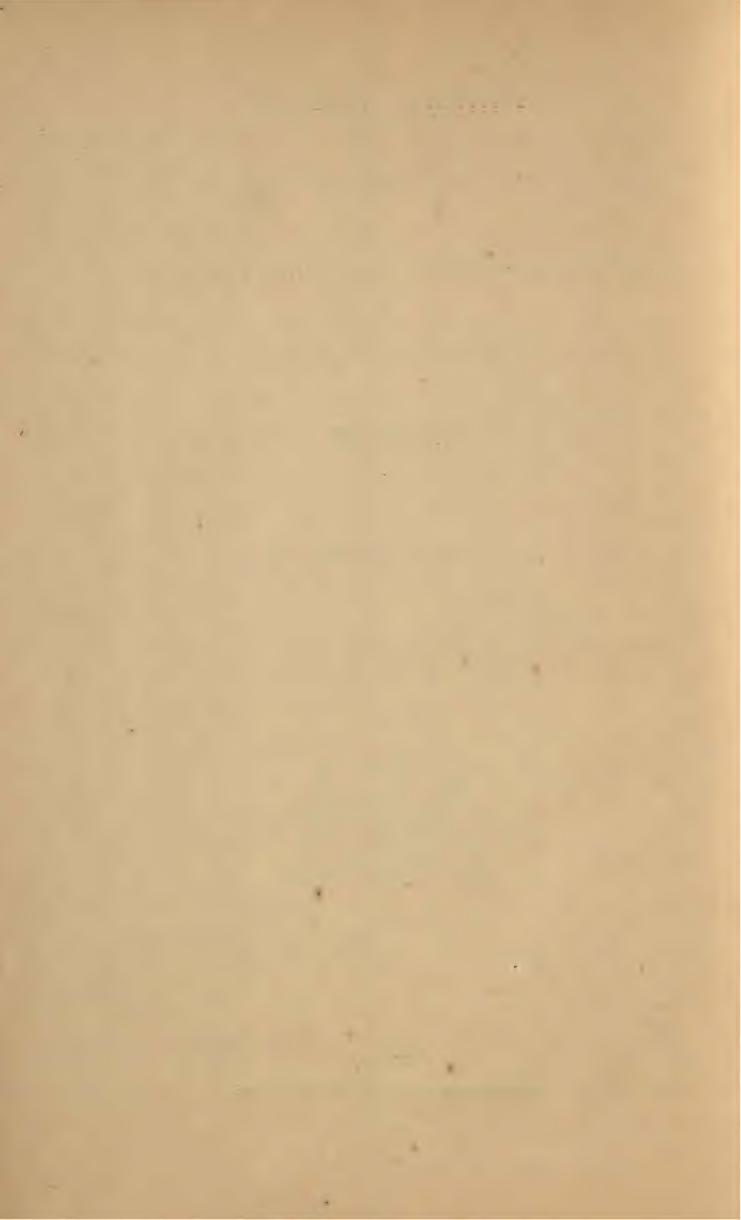

FOR THE YEAR

1907-08.

## PART I-ADMINISTRATIVE.

GOVERNMENT CENTRAL BRANCH PRESS.
1909.

## ANNUAL REPORT

OF THE

## DIRECTOR-GENERAL OF ARCHÆOLOGY

FOR THE YEAR

### 1907-08.

## PART I-ADMINISTRATIVE.

- 1. The past year's expenditure on conservation works, excluding what has Conservation. been spent in the Native States, amounted in all to Rs. 4,07,550. Towards this sum the Government of India contributed Rs. 1,02,898; so that the provincial allotments totalled only Rs. 3,04,652, or nearly a lakh and a half less than was provided in 1906-07. Such a sudden diminution of funds, at a time when we are still endeavouring to make up for the neglect of past years, has been a serious set-back, as indeed it was bound to be, to the work of the Department. As regards Burma, however, where the falling off has been most marked, an examination of the figures will show that the provision made by the Local Government in the previous year had been somewhat exceptional, and that a certain amount of reduction was therefore to be expected. For, in 1906-07 a sum of Rs. 64,000 odd was specially provided for the re-construction of the spire of the Mandalay Palace, which was found to be in imminent danger of collapse; and the allotment of Rs. 68,475 sanctioned this year exceeded in reality the provision made in 1906-1907 for general purposes by some Rs. 6,000. With this allotment all the usual annual repairs have been executed, and special repairs have been carried out at twenty three of the more important monuments in the Province, including among them the Bawbawgyi Pagoda near Prome, the Tupayon Pagoda at Sagaing and twelve of the celebrated buildings at Pagan.
- 2. In Bengal, Eastern Bengal and Assam and the Central Provinces, on the other hand, the reduction cannot be accounted for in the same way; and in these Provinces it is all the more regrettable, because the allotments as now reduced are far smaller than in Burma, while greater neglect in the past makes the need for a liberal expenditure even more pressing than it is in the latter Province.
- 3. Only in the United Provinces, the Punjab, Madras and Western India have the grants made by the Local Governments been approximately equal to those of previous years, and the campaigns of work in these circles have made uninterrupt. ed progress. In Bombay, in addition to the ordinary annual operations to some 56 monuments, extensive repairs have been carried out to the Jami Masjid at Broach, to the harem and palace at Sarkhej, to the Kalgudi temple at Degaon, to the Ibrahim Rauza, Gol Gumbaz and Jal Mandir at Bijapur, and to the mosque at Dabhoi in the Ratnagiri district. In the United Provinces, the historic palaces, mosques and tombs at Agra, Fathpur Sikri, Sikandarah and Jaunpur have still remained the chief centres of activity; but careful attention has also been given to the preservation of the later edifices at Lucknow, to the memorials of the Buddhists at Sarnath and Kalsi, and to various monuments of lesser fame at Majhera, Amroba, Fyzabad and elsewhere. Similarly in the Punjab, the chief operations have been directed towards repairing the buildings and beautifying their surroundings in the forts of Delhi and Lahore, at Humayun's Tomb,

and at Shahdara, but the claims of other monuments have not been neglected, and much has been done for the repair of the Hindu temples of Kangra ruined in the great earth-quake of 1905, and of other structures in the neighbourhood of Delhi, Jullundar and Dera Ghazi Khan.

4. Among the more famous monuments in other parts of India, which have come in for special repairs during the year, the following call for particular notice. In the Madras Presidency, the forts at Gurramkonda, Tranquebar and Gingee, the Kalyana Mahal and Flagstaff Tower at the last mentioned place, and several temples, palace and other buildings at Vijayanagar; in Bengal, the Minar and mosque at Pandua, the Dargah of Khan Jahan Ali and the Sat Gumbaz mosque at Bagerhat, the Dargah of Makhdum Shah at Maner and the Black Pagoda at Konarak; in Eastern Bengal and Assam, the Sona Masjid, the great golden mosque, the Firoz Minar and the Tantipara Mosque at Gaur, and the Adina Mosque at Pandua; in the Central Provinces the forts at Chanda, Gavilgarh, Narnalla and Deogarh and the temples at Bhandak; at Ajmer, the Badshahi buildings; in the Frontier Province, the Buddhist monuments at Takht-i-Bahi and Jamalgarhi.

Native States.

5. Everywhere except in Kashmir the work of rescue and repair has progressed steadily and systematically. At Bikaner, the Hanumangarh fort is still receiving attention. In Gwalior, careful repairs have been executed to the temples in the fort, to the tomb of Muhammad Ghaus and to the Gujari Mahal. In Chhatarpur State, equally good work has been done among the temples of Khajuraho, and in Mewar, the Darbar has followed up the reconstruction of the Jain Tower at Chitor by extensive repairs to the fort walls. I may also add here that the repairs that are being done by the Jain community to the Dilwara temples on Mount Abu, though progressing slowly, are in every way satisfactory.

Ancient Monuments' Act.

6. The task of framing general rules and regulations under the Ancient Monuments' Act has proved to be of considerable magnitude and complexity, and the matter still remains under the consideration of the Local Governments. In the meantime, various buildings which were in danger of being damaged have been declared protected under Section 3 (1) of the Act, and in Burma all the monuments without exception, which are maintained at Government expense, have been gazetted under this section. It is hoped that the action taken in Burma will eventually be followed in all other Provinces, and that advantage will be taken of the Act to protect other monuments also, which are not actually maintained by Government. For it does not follow that, because it has been decided that a monument is not to be repaired, it need therefore be entirely neglected and contractors or others allowed to destroy it for the sake of its materials. There are many ruins, which may not for one reason or another be worth repairing, but which may be objects of interest and value for centuries to come, if their decay is not hastened by unnecessary spoliation and rough usage.

Recent Orders.

- 7. The instructions contained in the Home Department Resolution no. 1-58—71, dated the 8th June 1883, requiring all Government Officers to report the discovery of objects of archæological interest were repeated and emphasised, and the orders referred to were extended to discoveries which may come to the knowledge of a Government officer and not merely to those which he himself may have made. It was also decided that all discoveries of objects of archæological interest should be reported to the head of the local Government or Administration within which the discovery was made, and that the local Government should issue orders for the preservation of such objects in situ or for their removal to a Provincial or local museum, or, in cases where no Local Museum exists, to the Imperial Museum at Calcutta.
- 8. The instructions contained in the Public Works Department Circular no. 4-P. W., dated the 8th September 1886, regarding the preservation of ancient buildings and other objects of archaeological and historical interest were also emphasised, and the officers in charge of the construction of roads, canals and other works impressed with the importance of taking effective measures to prevent the destruction of anything of interest which they may come across in the course of their work.

Contravention of

- 9. Only two cases of direct contravention of standing orders have occurred Standing Orders. during the year. In the circular letter No. 21-40-1 of 27th June, 1895, it was laid down that no archæological excavations were to be permitted except under the supervision of the Archæological Department, and these orders were reaffirmed in the Government of India Resolution No. 26-28-2 of 7th July 1903. They were ignored, however, by the Collector of Belgaum, who has recently carried out excavations among the dolmens at Konnur without informing this Department. The other case of contravention relates to the whitewashing of the gates of Champaner by the manager of the Jain Conference which was held there. The manager has been asked to remove the whitewash again, but whether he will do so or not, is not known. This case well illustrates the importance of having all monuments of value brought within the scope of the Ancient Monuments' Act.
- 10. It should be added here that three temples in the Madras Presidency, namely the Varada-Raja Perumal Temple at Madura, the Andankovil Temple Tanjore District and the Siva Temple at Tirukkalukkunram were partly demolished and repaired without any notice being given to the Government Epigraphist, and in all three cases valuable historic inscriptions, that had never been copied, were destroyed.

11. The manual of "principles for the guidance of those entrusted with the Manual of instruccare of ancient monuments", which was published by the Director-General in conservation. 1906-07, and to which reference is made in paragraph 8 of his Report for that year, was translated into the four chief vernaculars of the Madras Presidency and

circulated more widely among private owners of ancient monuments.

12. Good work in the matter of listing monuments has again been done in Raj- Listing of Monuputana, where Mr. Bhandarkar devoted his attention to the antiquities of Jodhpur ments. State. The new material that is coming to light in this part of India proves to be far more abundant than was at first anticipated, and the task of surveying it, even for the purposes of a preliminary catalogue, is a slow one. Indeed, it may be five or six years before the survey is completed, particularly as this and the new list for the Punjab are designed to be of wider scope and generally more complete than such lists have hitherto been. The compilation of the list of remains in Burma is going on pari passu with other cognate work, and the Superintendent reports that good progress has been made during the year in the Mandalay, Kyaukse, Pagan and Prome Districts. In the Frontier Province, Dr. Spooner

has taken in hand the revision of the old and wholly inadequate list compiled by Mr. C. Rodgers, and later on will supplement it with a description of the remains

in Baluchistan.

13. There is relatively little to choronicle regarding museums in the Eastern, Museums and minor Southern and Burma circles; but in Northern and Western India, great pro-antiquities gress has been made by the Archæological Department in the development, arrangement and cataloguing of local collections. At Peshawar, the number of new acquisitions is so great that the space set apart for museum purposes in the Victoria Memorial Hall, has already been found insufficient, and arrangements will have to be made at no distant date for increasing the accommodation. The rapid growth of the museum reflects the greatest credit on Dr. Spooner, who has spared no pains in collecting antiquities and classifying them according to the most scientific and up-to-date methods. It need hardly be said that a catalogue of this collection is a great desideratum, but the Archæological Superintendent already has his hands too full with other tasks to attempt to compile it single handed, and proposals accordingly have been made for the appointment of an assistant.

14. Dr. Spooner has also been responsible for sorting and classifying in the Quetta Museum a very large and representative collection of neolithic celts and arrowheads, specimens of pottery, enamel and glassware and other miscellaneous objects brought back by Colonel Sir Henry MacMahon from Seistan.

15. At Delhi, the new Naubat-Khana Museum in the Fort has been enriched by many fresh acquisitions, and a detailed catalogue with full descriptive notes is being prepared by Dr. Vogel. As this Museum is designed to contain only objects directly bearing on local history and especially on the history of the Imperial Mughal period, all exhibits not closely connected therewith have been transferred to Lahore.

- 16. Another museum to which Dr. Vogel has devoted much attention during the year was that of Mathura. Thanks to his and Pandit Radha Krishna's exertions, 226 sculptures of the Kushanaand subsequent periods, many of them inscribed, were acquired for the museum, besides a valuable collection which had been lying for many years uncared for in the Public Library at Allahabad. Apart from acquiring these new exhibits, Dr. Vogel has completed a catalogue of the whole Mathura collection, and the new acquisitions will be entered in it in the course of the coming winter. It is satisfactory to state that the Municipality is undertaking improvements to the building.
- 17. The example set by the Rajputana administration in founding a central museum at Ajmer, where representative collections from all the Native States can be gathered together, is being followed also in Central India. Arrangements, it is understood, are now so far advanced that it has been definitely decided to purchase the old Daly College for the purpose, and in the meantime coins and other antiquities are being collected together for it. For the Ajmer Museum Government has been fortunate in securing the services of Pandit Gaurishankar Hirachand Ojha as curator. The Pandit comes from the local museum at Udaipur and has already proved his antiquarian ability by the valuable contributions he has made to the Archæology of the State.
- 18. In the Western Presidency, the selection of a suitable design for the new Prince of Wales' museum at Bombay seems to be a more difficult problem than was foreseen. The collection of antiquities, however, with which to stock it when it is ready, is being rapidly augmented both at the Poona Museum and at the rooms of the Bombay Branch of the Royal Asiatic Society.

Fresh acquisitions.

course of official excavations, the following new acquisitions for the Imperial and Provincial Museums are especially worthy of notice. For the Indian Museum, Calcutta, a collection of 373 objects from the collections made in Central Asia by Dr. M.A. Stein, and to Buddhist Statues from Gaya. For the Madras Museum, a large series of metal idols from North Arcot acquired under the Treasure Trove Act and purchased through the Collector. For the Lucknow Museum, two cannons belonging to the old Oudh Dynasty, a collection of terra cottas from Sohnag, and a number of sculptures from Indorkhera in the Bulandshahr District, which had been lying for some years in the Delhi Municipal Museum. For the Lahore Museum, clay tablets from Kalatse and Kyor in the western Tibet; bronze ornaments (probably Buddhist) from a grave at Kyelang; and 203 objects from Dr. Stein's collection of Central Asian antiquities. For the Peshawar Museum several illuminated Persian manuscripts and an almost complete series of coins of the Sultans of Kashmir. For the Prince of Wales' Museum, Bombay, 6 Buddhist images, three of brass, one of wood gilt and two of black stone.

Treasure Trove.

- 20. The instructions issued by the Government of India in 1906-07 regarding the disposal of acquisitions made under the Treasure Trove Act have contributed greatly towards the scientific examination and classification of coins. The reports from the several Local Governments and Administrations received during the year show that 18,043 coins in all were examined,\* of which 13,747 were ancient, 217 mediæval, 34 Pathan, 2,141 Mughal, 28 Sikh and 899 Assamese. The remainder included 356 Larins and miscellaneous modern coins of Native States and the East India Company. 2,218 coins were acquired and distributed to the several museums in India and 13,567 coins were kept for sale.
- 21 The most notable finds in Northern India were some rare coins of the Mughal Kings, among which may be mentioned a square rupee from Jhansi, of Akbar's Bengal Mint and of the 39th llahi year, and another of Jahangir's Ajmer Mint with an unusual arrangement of the couplet on it. In western India, the most striking acquisitions were a large hoard of silver coins of the Trai-Kutaka King Dahragana (Dahrasena) of A. D. 456 and his son, discovered near the village of Kuzad in the Indapur Taluka of the Poona District. Another rare and important find was reported from Belgaum, which consisted of 10 silver coins of the

Bahmani Dynasty. In Bengal, the most important coins came from Sambalpur. namely, 16 gold coins of Jajalla Deva and Ratna Deva—the Rajas of Maha Kosala or Eastern Chedi.

- 22. Various coins were acquired under the Treasure Trove in Madras, but the information given about them is as yet very meagre.
- and movable antiquities leave but little time in the course of the year for excavation. But in every case where the spade has been employed, the work has been attended with valuable results. The first excavation of the season was undertaken in November at Rampurva, in the Champaran District of Bengal, well known for the Asoka pillar discovered there in 1877. This pillar was found deeply immersed in swampy ground, but by dint of continuous pumping and other expedients my assistant, Pandit Daya Ram Sahni, succeeded eventually in clearing it down to the base, securing a complete estampage of the edicts engraved upon it and recovering also the finely sculptured lion with which the column was originally crowned. At a short distance to the south, he also unearthed another column of much the same character, but with a bull instead of a lion surmounting it, and with a variation in the design round the necking of the capital. This figure of a bull, though less perfect in execution than the lion, gains in interest from the fact that it is the only example of that animal sculptured in the round which has come down to us from Mauryan times.
- 24. At Sarnath, where I again had the valuable co-operation of Dr. Sten Konow, some very striking developments took place this season. The whole northern side of the site proved, as we had previously surmised, to be exclusively occupied with monastic buildings erected one on the ruins of another at different intervals of time and representing, so far as can be judged at present, all the most important building epochs at Sarnath. But the latest and uppermost of these monasteries has been found to cover a much wider extent of ground than had ever been suspected. Including the courts which lead up to the main block of buildings, it has now been followed up for more than 760 feet from east 10 west and though the whole of the area which it covers has not yet been cleared, sufficient has been done to enable us to recover all the main outlines of its plan, as well as more precise details of the main structure and of the massive gateways which lead from court to court. This great monastery belongs approximately to the 11th century A. D.
- 25. The area which it covers was in earlier days occupied by several smaller monasteries, three of which have been partly excavated this season deep down below the foundations of the later structure. So far as can be judged, all these earlier edifices are more or less of the same character and date (late Gupta) and conform in general to the type with which we are familiar at Kasia and other places, though certain details in them are new to us. Beneath them, again, are still earlier structures, probably belonging to the Mauryan epoch, which, judging from the yield of a single trench sunk to their level, ought eventually to furnish results of immense value. Among other finds of importance made at Sarnath may be mentioned that of a Mauryan rail set up in the Gupta epoch a little to the north-east of the main shrine, of a pradakshina around the Jagat Sing stupa, and of a number of admirably preserved statues and a long inscription recording the erection of a vihara by Kumaradevi, the queen of Govindachandra of Kanauj.
- 26. Owing to serious famine in certain districts of the United Provinces, the excavations at Kasia had to be left in abeyance this season and Dr. Vogel's operations were transferred to the site of Saheth-Maheth, on the borders of the Bahraich and Gonda districts, in order that use might be made there of famine labour. This is the site where General Cunningham located the once famous Sravasti, and the new discoveries that have been made by Dr. Vogel prove the identification to have been correct. On the main site, which is known as Maheth and covers an area of more than 40,000 acres, Dr. Vogel completed the excavation of the two principal mounds—the Kachchi Kuti and the Pakki Kuti. The former turns out to be a Brahmanical Temple built of brick and decorated with terra cotta sculptures; the latter may have been a stupa. Not far from these buildings he cleared also one of the main gates of the city, and, on the opposite side of

Exploration

Maheth, recovered a goodly collection of Jain sculptures from the Temple of Sobhnath. At Saheth, the famous Jetavana of Buddhist chronicles, Dr. Vogel completed the excavation of several buildings which had been left unfinished by earlier explorers. Among these was a large monastery, which occupies the southwestern portion of the mound and had been partially dug into by Dr. Hoey. It is of unusual interest, as it contains a chapel facing the entrance gate with an anti-room and procession path; but more important than these features was the discovery of a copper plate in an earthen-ware case laid in the foundation of one of the cells. This plate records the gift of six villages to the community of Buddhist friars residing in the Jetavana by Govindachandra of Kanauj, and it finally removes therefore any doubt that may previously have existed among scholars, as to the identity of Saheth with the Jetavana.

27. In the Frontier Province, Takht-i-Bahi has again after a lapse of thirty years and more, begun to yield its treasures to the spade. Five years ago I urged upon the Local Government the importance of clearing up this famous site completely and effectually conserving its valuable remains; but it was not until the end of 1906, when Dr. Spooner had been appointed Superintendent on the Frontier, that an opportunity offered itself of taking the task in hand. In the first year, the work of clearance was started in the court of the main stupa; this season, it was continued in the monastic quadrangle to the north-east, and afterwards in the long court which lies between it and the main court. Here it became apparent that the efforts of earlier excavators had been very superficial and that there were hosts of sculptures yet to be found in it. Indeed, the actual number of sculptures that have been brought to light this year is almost incredible, considering that the site was officially supposed to have been exhausted. The collection includes hundreds of Buddha and Bodhisattva statues, besides many legendary scenes in relief, which materially improve our knowledge of Gandhara iconography.

28. Another work to which Dr. Spooner has devoted some attention, was the excavation of the mound known as Shahji-ki-Dheri, near Peshawar city, which M. Foucher had identified with the remains of the far famed stupa of Kanishka. Dr. Spooner's work here has been restricted to trial digging, and sufficient earth has not yet been shifted to settle the question one way or the other. Nothing, however, has yet come to light which throws doubt on M. Foucher's identification.

20. In the Southern Presidency, fresh ground has been broken by Mr. Rea at Sankaram, near Anakapalli, and some further valuable researches have also been made by the same officer on the Buddhist site at Amaravati and among the prehistoric remains at Perambair. The monuments brought to light at Sankaram consist of an apsidal ended chartya hall with cells on three sides of it, groups of stupus and other Buddhist edifices. An unusual feature about them is that some are hewn from the rock, some built of brick, while in other cases the two methods of construction are combined. In the cells surrounding the chaitya, numbers of interesting objects were found, among which may be noticed some rare coins of the Chalukyan king Vishnuvardhana, clay inscribed seals, clay models of stupas, pottery of various kinds, a small lingam and a neolithic celt. At Amaravati, Mr. Rea devoted himself this year, as last, to widening out the excavated area on all sides. At every point remains of buildings with sculptures and rails (plain, carved and inscribed) were discovered, and in some loose earth near the south gate, a gold relic casket was found. Another curious find was a group of pyriform funeral urns standing near a stupa. Similar urns were discovered also at Perambair, together with others of the elongated cist shape; and the data furnished at these two places, when co-ordinated with the results obtained at other sites, ought to furnish a definite clue as to the date of these burials.

30. Finally it remains to mention Burma, where some preliminary trials have been made on the site of the ancient Srikshetra, near Prome. The early history of this place, like that of the rest of Burma before the time of Anawrata, is wrapped in obscurity, but the sculptures that have now come to light, make it at least certain that a close connection existed between Srikshetra and Northern India as far back as the seventh century A.D. Some of the inscriptions that have been unearthed at Prome are unfortunately in an unknown script, which has

not yet been deciphered, and they fail consequently to add to our knowledge of the place.

Epigraphy.

- 31. The following account of the epigraphical work of the year is furnished by Mr. V. Venkayya, the Government Epigraphist for India.
- 32. The inscriptions copied or brought to light during the period under review number more than 880. The number of those copied in the Eastern Circle cannot be definitely ascertained from the Annual Report of that Circle, but so inscriptions are referred to in different parts of it as having been copied. Other epigraphs are also mentioned, but it is not stated if impressions of them were prepared or if notes were taken from them on the spot for insertion in the Annual Report.
- 33. In the Frontier Circle, three inscribed stones are reported as having been acquired for the Peshawar Museum. Two of them are in the Kharoshthi character, and the third, which is in the Gupta alphabet, is dated in the victorious year 48, which Dr. Konow takes as referring to the Harsha era, according to which its date would be A.D. 653.
- 34. In the Northern Circle, Dr. Vogel has copied 98 inscriptions, in Sanskrit, Prakrit, Arabic, Persian, Armenian and Tibetan. The most important of them are three lithic records and three copper plate grants. Of the former, two which are in Brahmi, have been acquired for the Mathura Museum. The first is on a Buddha statuette (height 2' 3½"), which the Brahmin who owned it worshipped as the sage Visvamitra. The inscription on its pedestal, however, calls it a Bodhisattva.
- 35. The second is on a colossal Naga statue (height 7' 4") found near the village of Chhargaon, 5 miles due south of Mathura. The villagers used to worship the statue occasionally, believing it to be a representation of Balarama, elder brother of the god Krishna. The well preserved inscription on the back of the statue does not, however, support this belief. The epigraph is dated in the 40th year of the reign of the Kushana king, Huvishka, and describes the image as "the Lord Naga" (Bhagava Nago). The third stone inscription belongs to the time of the Gupta emperor, Kumara-Gupta I. The three copper plates brought to light in the Northern Circle record gifts by the Gahadavala kings Chandradeva, Govindachandra and Harischandra, respectively.
- 36. Twenty-five Arabic and Persian inscriptions, two Portuguese epitaphs and one Sanskrit epigraph were copied by the Archæological Surveyor of the Northern Circle. Of the first, two belong to the period of the early Pathans and two to Sultan Sikandar Lodi. The Sanskrit epigraph was found at Ajmer and belongs to the time of Vigraharaja, apparently the Chahamana king of that name. Two Sanskrit dramas engraved on stone—one composed by the Chahamana king Vigraharaja himself and the other composed in his honour by the mahakavi Somadeva—were discovered by General Cunningham in the mosque where the present inscription was found.
- 37. Coming to the Eastern Circle, we find that the dedicatory inscriptions on some of the pillars of the railing at Bodh-Gaya have for the first time become legible. They have been deciphered by Dr. Bloch and prove that the term "Asoka railing" which has been given to the stone enclosure at Bodh-Gaya cannot any longer be upheld. The railing was put up about a century after the time of Asoka by the queens of Indramitra and Brahmamitra, who "either belonged to or were contemporaries of the Sunga dynasty of the 2nd and 1st centuries B. C."
- 38. The addition of the Central Provinces to the Eastern Circle has resulted in a systematic inspection of their antiquities. Both the Superintendent and the Assistant Superintendent of the Eastern Circle toured in the Central Provinces during the last winter. The Museums at Nagpur and Raipur were also visited by Dr. Bloch, who has drawn up a rough list of all the inscriptions on stone and copper in both of them. He proposes to publish his list in the Epigraphia Indica after checking it carefully during his next visit. Similar lists of the other principal epigraphical collections in India would be very useful. They would show to scholars interested in epigraphical researches the amount of historical material preserved in the Indian Museums. If the lists would also

8

furnish information as to which of the inscriptions are already edited or noticed (with references to journals or volumes where they are published) they would be really valuable.

- 39. Among the temples inspected by Dr. Bloch in the Central Provinces, is the Chaunsath Jogini shrine on the top of a conical hill near Bheraghat, the famous bathing place in the Jabalpur district on the river Narmada. The number of Joginis in the temple is actually 82 instead of 64, as one might expect from the name given to the temple. Most of the statues bear inscriptions on their pedestals. Dr. Bloch has found an epigraph on the proper left side of the door leading into the temple, which stands in the centre of the circular court. From this inscription it appears that the temple was built during the time of the Kalachuri princes Vijayasimha and Ajayasimha of Tripuri, who ruled over certain parts of Central India in the 12th century. A careful study of these statues may be expected to throw some light on ancient Hindu mythology.
- 40. Dr. Bloch mentions two Sanskrit inscriptions found in Muhammadan masjids, one in the Jami Masjid at Burhanpur and the other in the Jami Masjid at Asirgarh. He remarks that neither of these buildings was intended for the exclusive use of the Muhammadans. Hindus and Musalmans alike were to meet together in them to worship God in the spirit of the Mughal Emperor Akbar's new religion, the Dīn-i-Ilāhī.
- 41. In the Western Circle, out of the 84 inscriptions copied during the year, 4 are copper-plate grants. Of these, one belongs to the time of the Rashtrakuta Sankaragana, who reigned about the close of the 8th century A. D. Most of the stone inscriptions belong to the Chahamanas of Nadol and Jalor. Some of them refer to the reigns of kings for whom no inscriptions had been discovered. Others give us entirely new names, not traced in previous records. These are Katuka and Rayapula. The date furnished for Katuka corresponds apparently to A. D. 1143. The dates of Rayapala range from V. E. 1189 to V. E. 1202. The Paramara king Purnapala is represented by a stone inscription found at Bhadund and dated in V. E. 1102.
- 42. In the Southern Circle, the Superintendent has discovered a stone inscription of the Andhra king Vasithiputa Chadasata at Kodavalu in the Pithapuram Zamindari and a number of coins and inscribed clay seals at Sankaram in the Vizagapatam District. The Assistant Superintendent for Epigraphy copied 621 stone inscriptions and prepared impressions of six copper-plate grants. He has also discovered three more natural caves in the Madura District, with beds cut into the rock, two of which also bear inscriptions in Brahmi characters. Another Brahmi epigraph has been found by him in the Garikapadu agrahara in the Guntur District. The remaining inscriptions copied by him relate to the Pallava, Eastern Chalukya, Pandya Chola, Telugu-Choda, Vijayanagara, Kakatiya and Chera dynasties. Among the minor families represented in the collection for 1907-08 are the Kodumbalur chiefs, the Nayakas of Madura, the Tanjore Nayakas and the Setupatis of Ramnad. The Assistant Superintendent has also examined three Indian inscriptions now preserved in the National Museum at Copenhagen. Impressions of two of them and a plaster cast of the third were sent to him by the Rev. E. Loventhal of Vellore. The history of the Pandyas and that of the Cholas are discussed at length in the epigraphical report of the Southern Circle in the light of the materials collected during the year. Early Pandya history receives fresh elucidation from a Vatteluttu copper-plate grant, impressions of which had been made over to Mr. Venkayya by Doctor Fleet some years ago.
- 43. In Burma, estampages of 21 inscriptions were procured of which the earliest is dated in A. D. 1288. The majority of them relate to the construction of religious edifices and endowments for their maintenance. One of the inscriptions is in Talaing, while the rest are in Burmese, Pali or a mixture of both.
- 44. The architectural survey of the Palace buildings in Mandalay mentioned in my previous report was continued and the portion of the work assigned to the Public Works Department completed. The Archæologica Department is now putting together the material for the historical portion of the letter-press. The map of Vijayanagar and the surrounding country which had

Survey work)

been in preparation for several years past was brought to completion. Of the total number of 123 drawings prepared by the Department during the year, 29 relate to the Tile mosaics in the Lahore Fort and 7 to the mosaics in the Diwan-i-Am at Delhi, while 50 drawings were prepared in connection with the various excavations undertaken during the year. Of the latter, 22 belong to Sarnath and 16 to Saheth-Maheth.

45. Details of the journeys undertaken by the Superintendents will be found in their respective Annual Reports. My own tours took me in August to Lahore, Rawalpindi, Srinagar, Islamabad, Gulmarg and other places in Kashmir, whence I returned to Head Quarters on the 12th of September 1907. In the following autumn I visited Delhi, Agra, Jalgaon, Ellora, Bombay and then proceeded southward to Madras, Trichinopoly, Madura, Conjeeveram and Anakapalle and retraced my way northwards to Calcutta. From Calcutta I proceeded to Benares to conduct the excavations at Sarnath, and finally returned to Simla on the 13th March 1908. The Government Epigraphist accompanied me as far as Ialgaon and afterwards toured with me through Southern India. He wisited Jalgaon and afterwards toured with me through Southern India. He visited Nasik, the Ajanta, Ellora and Karli caves, Poona, Kamalapuram, Hallebid, Mathura, Brindaban and Lucknow and later on co-operated with me in the excavations at Samath.

46. In addition to the Annual Progress Reports of the Provincial Superin- Reports and Pubtendents, the Index to Volume VIII and parts II and III of volume IX of the licutions, Epigraphia Indica and the Portfolio of Sind Tiles were published during the year. A number of other volumes were in course of preparation. Dr. Vogel's work on the Chamba State Inscriptions and on the Tile decoration in the Lahore Fort and his catalogue of the sculptures and inscriptions in the Mathura Museum are now practically ready for the Press. The catalogues of the Lucknow, Lahore and Delhi museums are well in hand, and lists of the coins in the Phayre Museum at Rangoon and of the sculptures in the Nagpur and Raipur Museums have also been commenced. Lastly, it may be added that arrangements have been made for the revision of the first volume of the Corpus Inscriptionum Indicarum and for the publication of the 2nd volume of the same series.

47. 855 volumes were purchased for the library, and 220 were received either as presents or in exchange for our own publications. 203 Atlas sheets were also added to existing collections of maps. Of the books, the following call for special mention:—Publications of the Pali Text Society, 37 volumes; Bombay Sanskrit Series, 64 volumes; Abhidhana-sangraha, 11 volumes; Sanskrit-Worterbuch, 7 volumes; Le Museon, 24 volumes; Vinaya-pitakam in Pali, 5 volumes; Journal of the East India Association, London, 16 volumes; Hakluyt's Principal Navigations, 12 volumes; Purchas' Pilgrimes, 20 volumes; Journal of the American Oriental Society, 24 volumes; Harvard Oriental series, 6 volumes; the Mahabharata, 18 volumes; Journal and text of the Buddhist Text Society of India, 7 volumes; the Indian Antiquary, 31 volumes; Giornale della Societa Asiatica Italiana, 18 volumes; Oriental Translation Fund Series, 15 volumes; Journal Asiatique, 125 volumes; Asiatic Journal, 23 volumes.

48. Mr. W. H. Nicholls vacated the post of Archæological Surveyor, Personnel, Northern Circle, on the 26th of June, 1907, on his appointment as consulting Architect to the Government of Madras. Maulvi Muhammad Shuaib held current charge of the office until the 9th December following, when Mr. R. F. Tucker succeeded him. Dr. J. Horovitz, Professor of Arabic, Muhammedan Anglo-Oriental College, Aligarh, was appointed Epigraphist for Moslem inscriptions in place of Dr. E. D. Ross. Dr. Vogel was compelled to take privilege leave, on account of prolonged illness, for three months, with effect from the 4th April 1907. Pandit Hiranand was placed in charge of the current duties in Dr. Vogel's absence. Mr. Cousens availed himself of three months' privilege leave from June to August 1907, and Mr. D. R. Bhandarkar held charge of his office. Subsequently, the latter took two months' privilege leave, with effect from the 14th of October 1907. Mr. Venkayya went on six weeks' privilege leave. Dr. Bloch returned from his medical leave and took over charge of the office of Superintendent, Eastern Circle, from Mr. Longhurst on the forenoon of the 7th January 1908. The services of Mr. D. R. Bhandarkar, who

was orginally appointed for a term of three years only, were extended for another four years. The Scholastic period of Pandit Daya Ram Sahni being over, he was appointed as my Excavation Assistant, in September 1907. Maulvi Ghulam Yazdani, Persian and Arabic Scholar, left me of his own accord, in April 1907, and in the August following, Maulvi Sadr-ud-din, B.A., was selected, from the Islamia College, Lahore, to fill his place. Mr. V. Natesan, B.A., from Pachaiyappa College, Madras, was selected Sanskrit Scholar from January 1908.

The state of Kashmir hitherto included in the Northern Circle was transferred to the Frontier Circle.

1. H. MARSHALL,

Director-General of Archaelogy.

#### APPENDIX A.

Special grant-in-aid—The lakh of rupees provided by the Government of India for assisting the Local Governments in special Archæological works, was further supplemented by Rs. 15,000, making a total of Rs. 1,15,000 in all.

The following allotments were made:-
